

# GUARDIAN JUNIOR BCD

The Northern Diver Guardian Junior BCD is designed specifically to support young divers as they develop their diving skills. It combines a durable construction with practical features and an adjustable fit for comfortable, dependable performance underwater.

Built from robust 600D polyester and 420D nylon, the Guardian Junior features a mini power inflator system, three pull dumps and a single-cylinder housing for reliable buoyancy control. 14 CETL plastic D-rings and two large zipped pockets provide plenty of options for carrying and securing essential diving equipment.

The BCD also features an EES (Easy Evacuation System), with an accessible pull handle positioned at the top of the moulded protection plate. This allows another diver to grab, control and mover a diver in an emergency.

Padded shoulder straps, adjustable chest, waist and shoulder straps, and a moulded padded back plate provide comfort and support. The reinforced cylinder cam band includes a removable pocket for the Northern Diver Flexi-Light, while the rugged side panels add durability.

Supplied with a Northern Diver carry bag, the Guardian Junior is a dependable BCD for young divers progressing through their early diving experiences.

## FEATURES
