

THOR 1600G DRYSUIT

SPECIALIST CONTAMINATED WATER

Our Thor drysuit is manufactured from a vulcanised polymer created from a mix of high-grade rubber and EPDM.

Vulcanised laminated polymers are carried on a multidirectional 4-way-stretch knitted polyester, which gives excellent strength and durability.

The Thor is suitable for commercial diving applications but is also an excellent option for military and rescue purposes. The 1600G Thor comes with integrated safety boots with a stainless steel mid-sole foil and a composite toecap. The 1600G suit also has a heavy duty zip.

All Thor drysuits are CE approved and conform to the latest EEC PPE directive regarding drysuits.

Our quality control management conforms to BS EN ISO 9001:2008, ensuring that all Northern Diver products are of the highest quality and manufacturing standards.

Independent tests show that the Thor drysuit is resistant to chemical permeation. Full details are available on request.

- Chemical permeation resistant
- Triple-vulcanised bonded for life seams with reinforced knee & crotch area
- CE Approved

The drysuit can easily be washed down after use.

THOR 1600G

Thor safety boots come fitted to the Northern Diver Thor 1600g contaminated diving suit. These boots are ergonomically designed and protect against sharps, impacts and chemical and biological permeation.

The boot's EPDM rubber construction incorporates a composite toe cap, a mid-sole foil, neoprene insulation and a rugged outsole. Our lace-up mid calf overboots can be worn with these boots.
