Adjustable Telescopic Paddle

The Northern Divers Fibreglass SUP Paddle is a lightweight and versatile paddle designed for iSUP and paddleboard adventures. With an adjustable telescopic shaft, durable ABS blade and comfortable T-bar handle, it provides excellent control and performance on the water.

The strong, stiff fibreglass shaft can be adjusted from 160cm (63") to 210cm (82.7"), making it suitable for a wide range of paddler heights. Clear markings on the shaft make setting the correct paddle length quick and simple.

At just 920g (2.02lbs), the paddle is lightweight and, importantly, it floats, providing added reassurance during use on the water. The durable shockproof ABS blade is designed to withstand regular use while delivering powerful strokes and responsive handling.

The ergonomic T-bar grip provides a comfortable and secure hold, helping you maintain control of both the paddle and your board. The three-piece construction also allows the paddle to be quickly dismantled for convenient storage and transportation.
